Technical Barriers to Trade and the Impact for the Medical Technology Sector

TBT Webinar

Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

Tiers 1&2 – World Trade Organization & TBT Agreement as GRP

Renata Amaral,
Technical Secretariat

Outline

- WTO General Rules
- Non-Tariff Trade Barriers
- Coverage of the TBT Agreement
- Main Principles of the Agreement
- Relevant Provisions
- ePing System

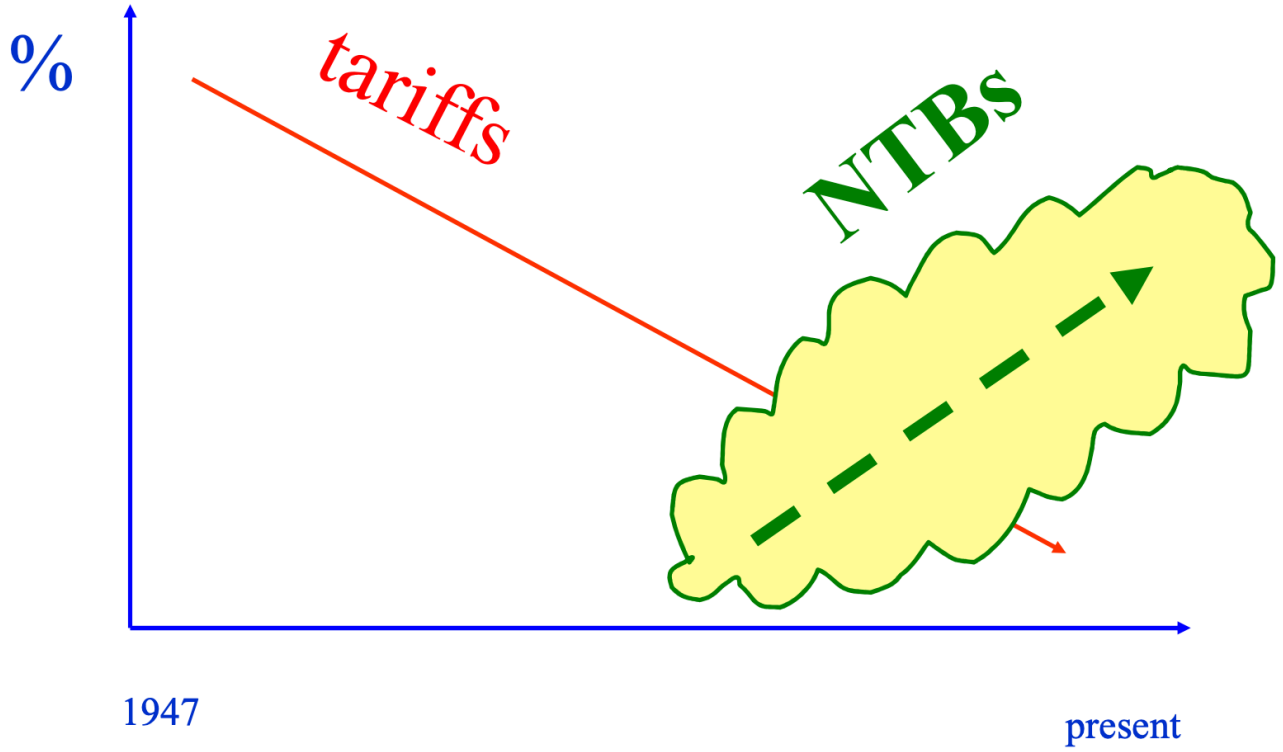
WTO General Rules

- The only international body dealing with rules of trade between nations (164 Members).
- WTO agreements provide the legal ground- rules for international commerce.
- They bind governments to keep their trade policies within agreed limits.
- Help trade flow as freely as possible (e.g. by removing obstacles, providing confidence, transparency and predictability).

Non-Tariff Barriers to Trade

- Technical measures (e.g. in standards)
- Internal taxes or charges
- Customs rules and procedures
- Quantitative import restrictions
- Public procurement practices
- Subsidies and related government supports
- Investment restrictions or requirements
- Transport regulations or costs …

Non-Tariff Barriers to Trade



Coverage of the TBT Agreement

- Technical measures (e.g. in standards)
- Internal taxes or charges
- Customs rules and procedures
- Quantitative import restrictions
- Public procurement practices
- Subsidies and related government supports
- Investment restrictions or requirements
- Transport regulations or costs …

The TBT Agreement

- **The acts as an instrument to:**
  - Encourage Members to use less-trade restrictive approaches to meet regulatory objectives
  - Harmonize through the use of relevant international standards
  - Provide transparency
  - Avoid and resolve trade disputes related to standards matters

The TBT Agreement

- **The Agreement safeguards against:**
  - The use of technical requirements as disguised restrictions on trade
  - The development of inefficient technical requirements and procedures

The relevance of the WTO for GRP

- Unnecessary regulatory differences can impose costs that prevent businesses from engaging in trade.

- The WTO plays an important role in supporting efforts to facilitate trade through regulatory cooperation among its 164 members, offering a **multilateral platform for dialogue among governments on trade rules, and throughout the full rule-making cycle.**

- The disciplines of the TBT Agreement can help contribute with effectiveness and efficiency of regulations through GRP. It laws down specific legal disciplines, which directly address the preparation, adoption and application of domestic regulations on goods.

- The TBT Agreement provides a unique multilateral transparency framework for regulations affecting the trade in goods.

TBT Agreement: main principles

- Non-discrimination
- Avoidance of unnecessary barriers to trade
- Harmonization through the use of international standards, guides and recommendations
- Transparency (notifications and enquiry points)
- Concepts of equivalence of technical regulations and mutual recognition of results of conformity assessment procedures

TBT Agreement

- Article 2.2: Members shall ensure that technical regulations are not prepared, adopted or applied with a view to or with the effect of **creating unnecessary obstacles to international trade**.

- Article 2.3: Technical regulations shall not be maintained if the circumstances or objectives giving rise to their adoption no longer exist or if the changed circumstances or objectives can be addressed in a **less trade-restrictive manner.**

- Article 2.4: Where technical regulations are required and relevant **international standards exist** or their completion is imminent, **Members shall use them**, or the relevant parts of them, **as a basis** for their technical regulations.

Principles to Develop International Standards

- The WTO Committee on Technical Barriers to Trade adopted a set of principles to which an organization engaged in the development of international standards must comply.

- These principles have been captured in document "G/TBT/ 1/REV. 8. Section IX," titled ***Decision of the Committee on Principles for the Development of International Standards, Guides and Recommendations with Relation to Articles 2, 5 and Annex 3 of the Agreement.***

MEDICAL TECHNOLOGY SECTOR

TBT Agreement - Definitions

Annex 1 of the TBT Agreement

Technical Regulation:
A document that lays down product characteristics or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory.

Standard:
A document approved by a recognized body, that provides, for common and repeated use, rules, guidelines or characteristics for products or related processes and production methods, with which compliance **is not** mandatory

Conformity Assessment:
Any procedure used, directly or indirectly, to determine that relevant requirements in technical regulations or standards are fulfilled. Includes, inter alia, procedures for sampling, testing and inspection; evaluation, verification and assurance of conformity; registration, accreditation and approval.

Major Medical Technology Regulatory / Trade Challenges

1. **TBT agreement not implemented with most medical device regulators**

   - Most medical device regulators (staff drafting regulations) either not aware of the TBT agreement or not required to implement it by trade ministries
   - Most medical device regulators are not aware of the IMDRF guidance documents and the hundreds of relevant medical device standards upon which they should be basing their regulations (ISO, IEC, et al.)
   - Most medical device regulators still opting to dedicate their limited public health resources towards developing their own country/agency-unique requirements
   - If there is awareness of the TBT agreement, implementation is ex post and not ex ante

2. **Medical devices improperly regulated as drugs**

ePing system - WTO

ePing is an SPS & TBT notification alert system is a publicly available and self-subscribing service, whereby subscribers are able to receive email alerts regarding SPS and TBT notifications covering particular products and/or markets of interest to them.

In addition, users can search notifications, share notifications, upload additional information and participate in discussions.

ePing also offers an Enquiry Point Management Tool to facilitate domestic as well as international information sharing and discussion.

ePing system - WTO

ePing track product requirements in export markets

World Trade Organization | International Trade Centre | United Nations

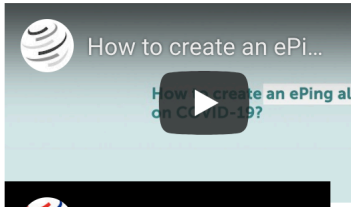
About | Search notifications | Enquiry points | News & events | Reference materials | Register | Log in | EN

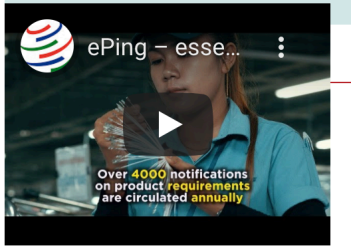
ePing enables timely access to evolving product requirements and facilitates dialogue amongst the public and private sector in addressing potential trade problems at an early stage.

64108
notifications included

#epingalert, #wtotbt, #wtosps

Step-by-step video on how to set up an email alert on COVID-19 related notifications





Search

Search notifications on product requirements, filtering by specific products or export markets

Receive alerts

Register for free to receive email alerts on new SPS & TBT notifications

Collaborate

Once registered, benefit from additional features such as the national forum

International Standards and Conformity Assessment Support GRP

June 2020

Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

Tiers 1&2 – International Standards and Conformity Assessment as GRP

Jessica Roop, Senior Manager, International Policy for the America National Standards Institute (ANSI)

Key Terms

- **Standards**
  - **Market-driven** product and service specifications, established by consensus and approved by a recognized body that provides for common and repeated use (e.g., technical requirements, management systems, etc.)
- **Technical Regulations**
  - **Mandatory** technical specifications, which may include particular standards or conformity assessment procedures
- **Conformity Assessment**
  - **Processes and systems** used to verify the compliance of a product, person, process or system to either a standard or a regulation (e.g., testing, certification)
    - **Accreditation** is the assessment of the competence of conformity assessment bodies, and may be included in “conformity assessment”

What is consensus?

Substantial agreement has been reached by directly and materially affected interest categories. This signifies the concurrence of more than a simple majority, but not necessarily unanimity.

Consensus requires that all views and objections be considered, and that an effort be made toward their resolution and to reconcile any conflicting arguments.

International obligations: WTO TBT Agreement

- The World Trade Organization (WTO) Technical Barriers to Trade (TBT) Agreement ensures that regulations, standards, and testing and certification procedures do not create unnecessary obstacles to trade.
  - Notification
  - International standards and recognition
  - Non-discrimination
  - Reasonable time to implement

Guiding Principles: WTO TBT Agreement

- Transparency
- Openness
- Impartiality
- Effectiveness and relevance
- Flexible
- Consensus
- Performance-based
- Coherence
- Due Process
- Technical Assistance
- Timely
- Balanced

WORLD TRADE ORGANIZATION

International Standards

- Standards should meet societal and market needs and should not be developed to act as barriers to trade
- Standards that meet the WTO TBT principles are “international standards”, regardless of the organization that developed
- Code of Good Practice – TBT Agreement, Annex 3

What are ANSI-accredited SDO's?

- ANSI accreditation of SDOs and U.S. TAGs promotes alignment with the WTO's Internationally Recognized Principles for Standards Development

ANSI *Essential Requirements* for the development of American National Standards

World Trade Organization Technical Barriers to Trade Agreement

Openness
Transparency
Due Process
Consensus

ANSI
American National Standards Institute

What is ISO?

- The **International Organization for Standardization** (ISO) is a non-governmental organization established in 1947 and based in Geneva, Switzerland.
- ISO is a federation of national standards bodies from more than 160 countries, with one body representing each country.
- Its mission is to promote the development of standardization and related activities in the world; to facilitate the international exchange of goods and services; and to develop cooperation in intellectual, scientific, technological and economic activity.

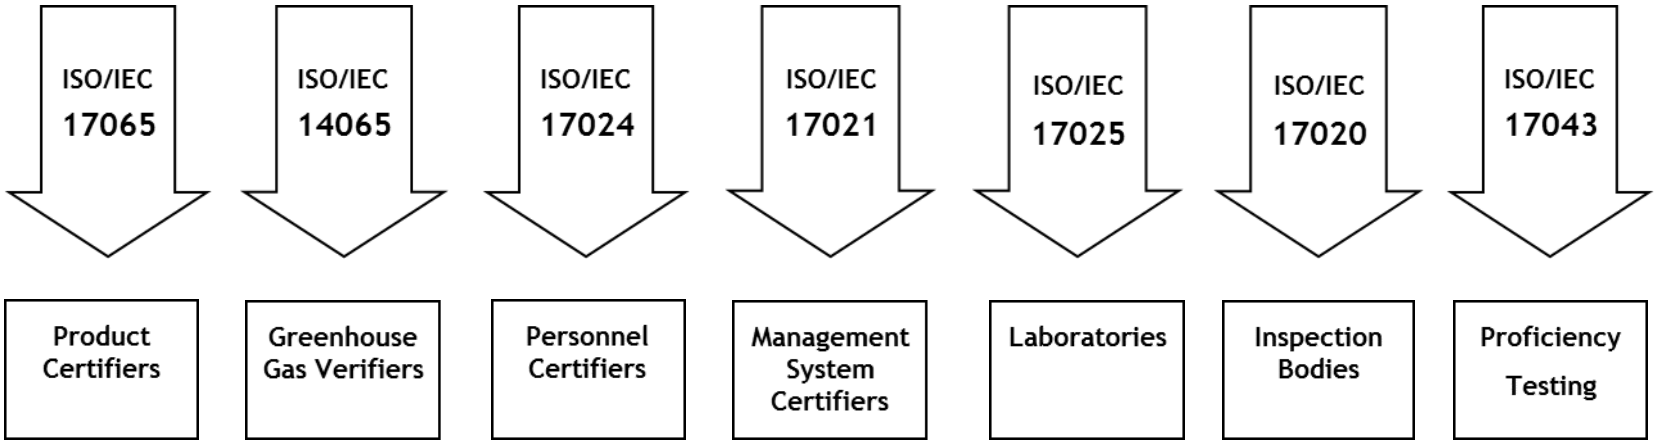
What is IEC?

- The **International Electrotechnical Commission** (IEC) is a not-for profit, quasi-governmental organization located in Geneva, Switzerland.
- Founded in 1906 specializing in the electrical and the electronic products field.
- The IEC's members (per country member structure) are National Committees and they appoint experts and delegates coming from industry, government bodies, associations and academia to participate in the technical and conformity assessment work of the IEC.

What is accreditation?

- Accreditation is the **independent evaluation** of conformity assessment bodies (CABs) against recognized standards to carry out specific activities **to ensure** their impartiality and **competence**.

Conformity Assessment (ISO/IEC 17011: Accreditation of CABs)



What is the IAF?

- **International Accreditation Forum (IAF)** is the world association of conformity assessment accreditation bodies in the fields of management systems, products, services, personnel and other similar programs of conformity assessment.
- Its primary function is to develop a single worldwide program of conformity assessment which reduces risk for business and its customers by assuring them that accredited certificates are reliable.
- Objective: “Certified Once – Accepted Everywhere”

What is ILAC?

- **The International Laboratory Accreditation Cooperation (ILAC)** is an international cooperation of laboratory and inspection accreditation bodies.
- Operating in accordance with ISO/IEC 17011 and involved in the accreditation of conformity assessment bodies including calibration laboratories (using ISO/IEC 17025), testing laboratories (using ISO/IEC 17025), medical testing laboratories (using ISO 15189), inspection bodies (using ISO/IEC 17020) and proficiency testing providers using ISO/IEC 17043.

IAF MLA Mark

- Multilateral Recognition Arrangement (MLA)
  - Based on ISO/IEC 17011 “Peer Assessment”
- Value:
  - assurance of equality, reduced time and cost
- MLA Scope
  - “Main” Scope: “equally reliable”
    - (e.g., management system, product)
  - “Sub” Scope: “equivalent”
    - (e.g., quality or environmental management system)

Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

Why are standards important?

- Standards are tools that help to reduce costs, minimize waste, limit errors and increase productivity.
- Standards help companies to access new markets in developing countries and facilitate global trade.
- Standards contribute to safety, provide protection for the environment, provide for product protection against climatic or other adverse conditions.

Why is conformity assessment important?

- Non acceptance of test reports and certificates is a non-tariff obstacle to trade.

- A harmonized approach to conformity assessment standards facilitates international trade.

Using International Standards to Support the Regulation of Medical Technology

Joe Lewelling, VP of Standards Strategy and Emerging Technologies, AAMI

9 June 2020

Tier 2 – International Standards and SDOs for Medical Technology

Joe Lewelling, Vice President of Standards Strategy and Emerging Technologies at the Association for the Advancement of Medical Instrumentation (AAMI)

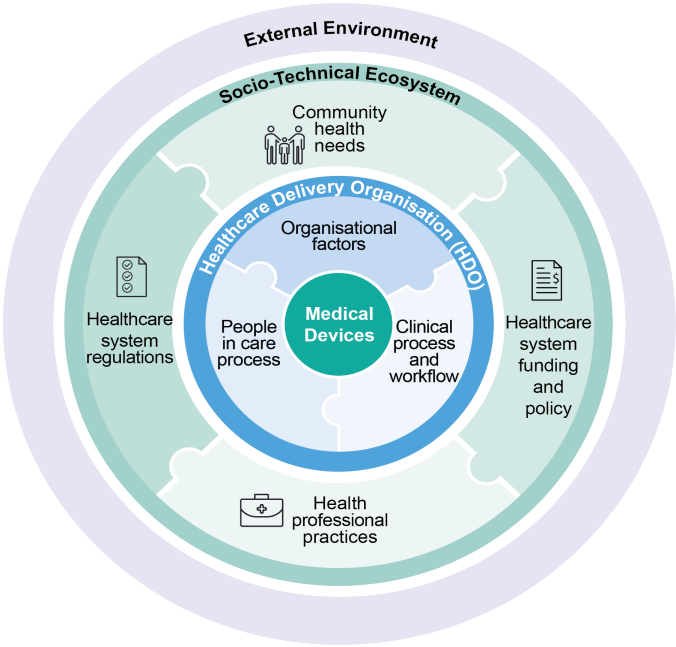
Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

Principles and purpose of medical device standardization

Principles

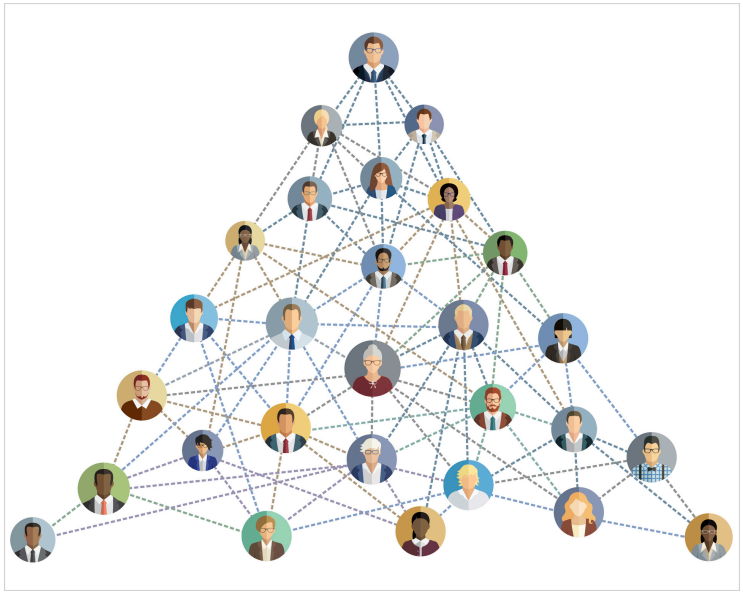
- Standards only where there is a need
- Openness, transparency, due process (WTO TBT Principles)
- Focus on safety, efficacy, security and access (avoid design specifications)
- One standard—Preference for global solutions
- Aligned with technical regulations!
- Goal is *better* patient outcomes

The Healthcare Technology Ecosystem



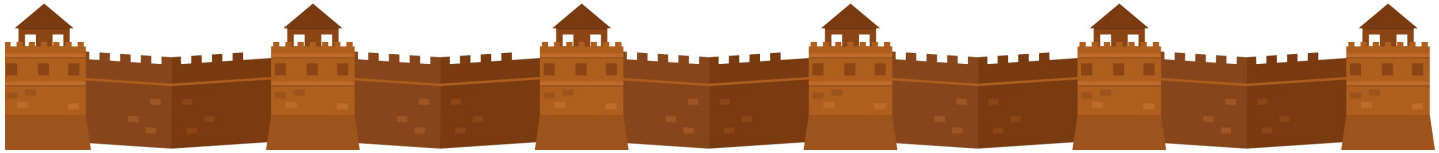
Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

Goal of Standards→ "*Better Patient Outcomes*"…..



Tens of thousands of clinical, regulatory and government experts involved, worldwide

Gate-keeper (pre-market) approach to safety and effectiveness

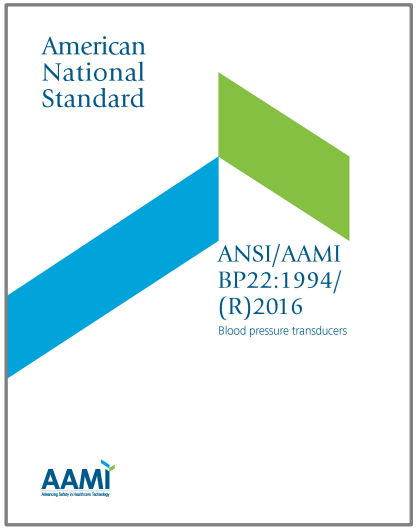


- ✓ Ensures effectiveness
- ✓ Ensures devices meet state of the art requirements for safety
- ✓ Comparatively simple
- ✗ Hinders access to new products
- ✗ Does not ensure ongoing product quality
- ✗ Does not promote (may hinder) improvement and innovation
- ✗ Does not ensure on-going quality of devices/emergent defects
- ✗ Does not address emergent hazards or defects

Gate-keeper (pre-market) approach

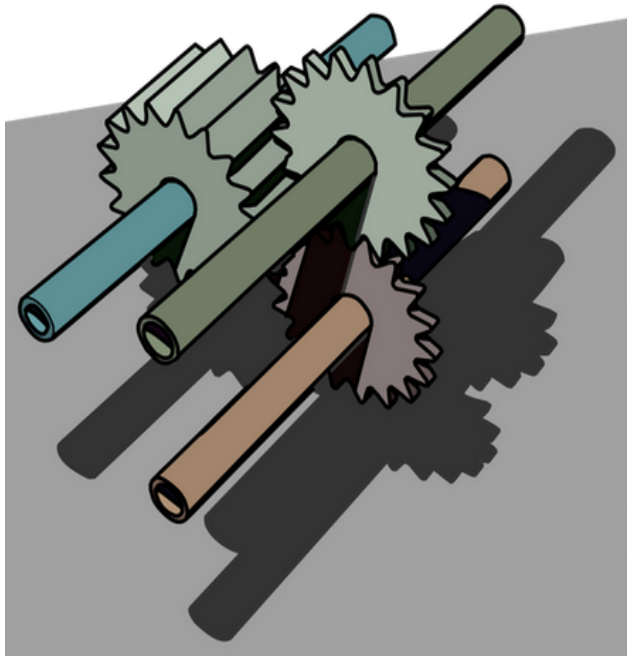
U.S. Code of Federal Regulations 21

- §870.2870 (Transducer, Pressure, Catheter Tip)
- §870.2850 (Transducer, Blood-Pressure, Extravascular)
- §870.2060 (Amplifier And Signal Conditioner, Transducer Signal)



Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

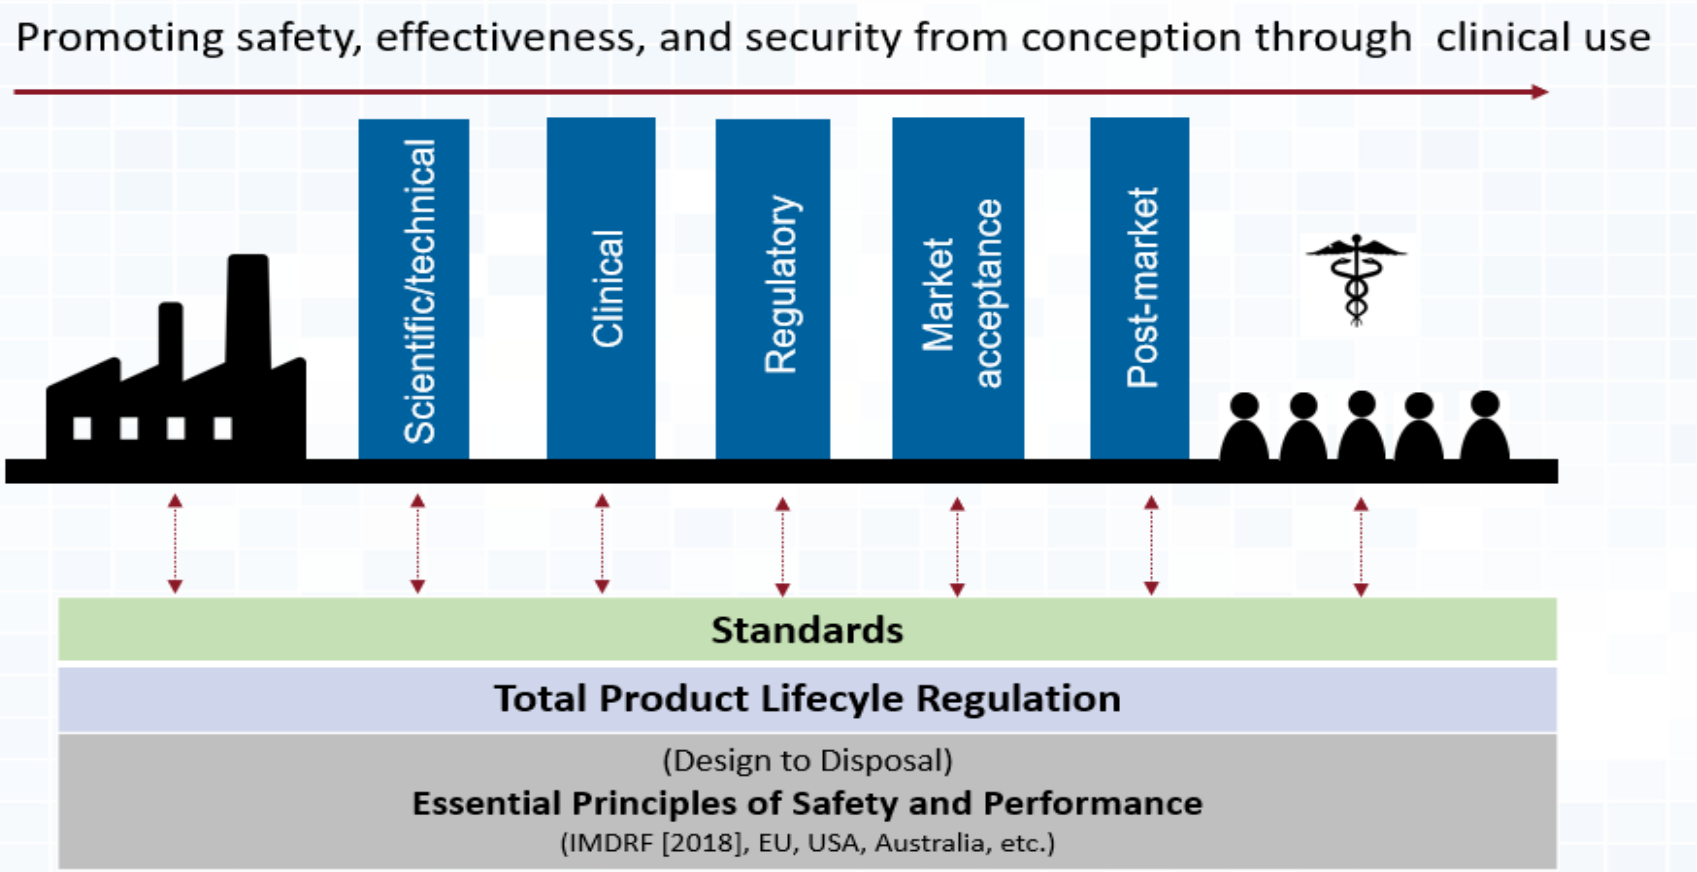
Systems (life cycle) approach to managing safety and effectiveness



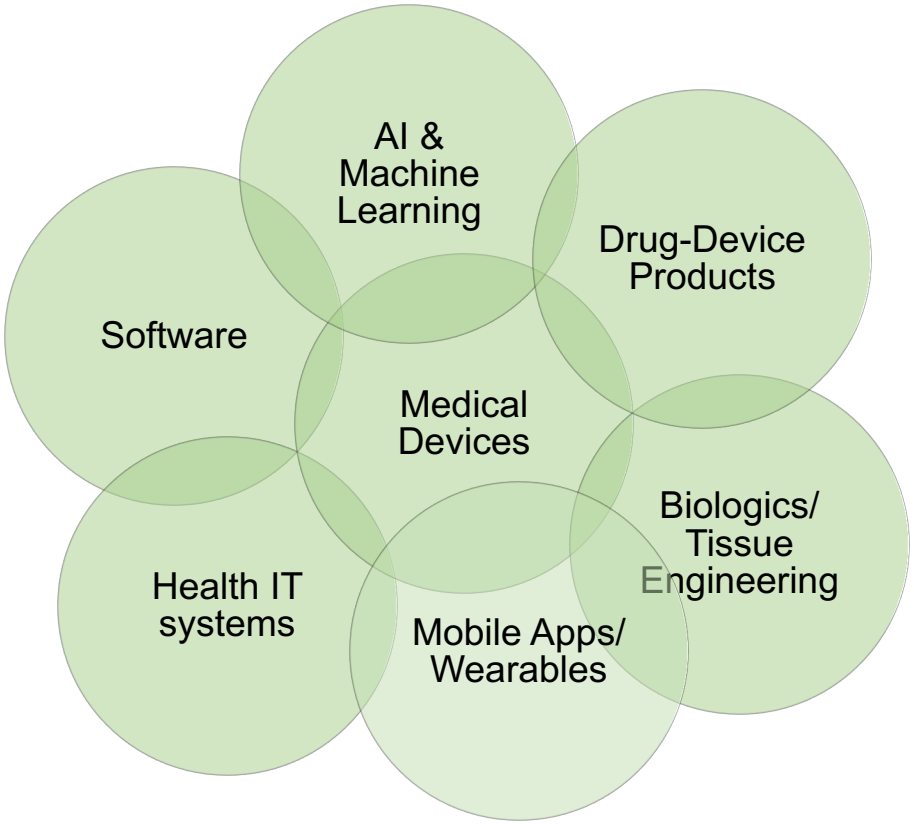
- ✓ Promotes safety and effectiveness, throughout product lifecycle
- ✓ Facilitates entry of new products
- ✓ Encourages product improvement and innovation
- ✓ Ensures on-going quality of products
- ✓ Ensures emergent hazards or defects are identified and addressed

Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

Systems (life cycle) approach



Inter-American
Coalition for
Regulatory Convergence
MEDICAL TECHNOLOGY SECTOR

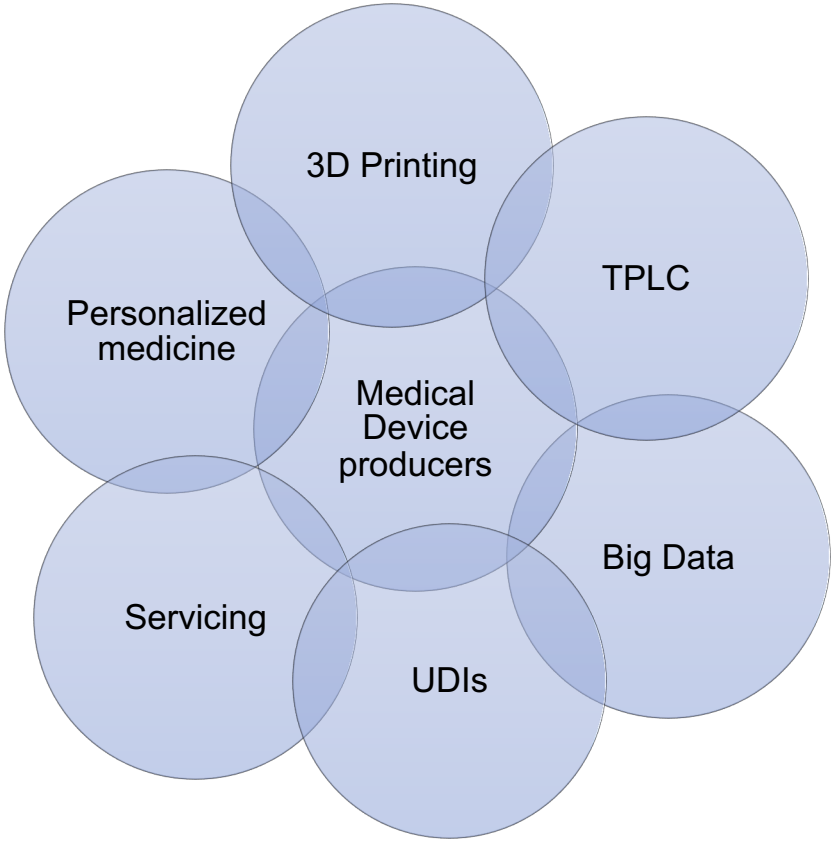


Future view: Unprecedented convergence of technologies

Medical devices are becoming more sophisticated, more complex and more effective

Future view: Change drivers

Advances in manufacturing and information technology are changing medical device companies from producers of products to providers of health care services



Focus for Medical Device Standards Developers

- Shared safety management across the TPLC
- Combination products
- Emergent Technologies
- Distributed (remote) healthcare
- Faster processes
- Consumerization/Commoditization
- Personalized health

Regulatory participation in standards development..

- Ensures regulators, concerns are addressed
- Promotes achievement of regulatory goals
- Facilitates common understanding of the standards
- Provides credibility for the standards

Regulator involvement in standards development

- Reduces administrative burden
- Enables “smart”, nimble, and responsive regulation
- Ensures state-of-the-art levels of **safety** and **effectiveness** and **security**
- Lowers costs and improves **access**
- Leverages the expertise of thousands of medical technology experts from around the world
